MINISTRY OF EDUCATION SCIENCE AND TECHNOLOGY  
MASTERFUL EDUCATION SERVICES PLATFORM  
(MESP – TANZANIA)**

**CONTANT: 0715 966 222  
END MONTH EXAMINATION  
STANDARD FIVE  
SUBJECT: MATHEMATICS**

**TIME: 1:40**

**APRIL. 2024**

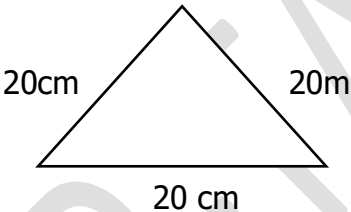

***Pupils name:*** \_\_\_\_\_ ***school name:*** \_\_\_\_\_

**INSTRUCTIONS**

1. These examinations contain **8 questions with section A, B na C.**
2. Answer all questions as instructed in every section.
3. All answers should be provided in the space given in the examinations paper
4. Avoid
5. Phones and unwanted material are not allowed in the examination rooms

## SECTION A (20 MARKS)

1. Answer the following questions in the space provided

| NO. | QUESTIONS                                                                                                                                                                                            | WORKING PLACE | ANSWER |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--------|
| I   | Grade five pupils were asked to identify the correct position of digit 7 in the numeral 70965. Which correct answer did they get?                                                                    |               |        |
| Ii  | How can you write six hundred and six thousand and six correctly?                                                                                                                                    |               |        |
| Iii | Write 34.654 in word.                                                                                                                                                                                |               |        |
| Iv  | During mathematics session, a teacher wrote 7968 on the chalkboard and asked the pupils to re-write it to be the biggest digit four numbers formed. Which correct answer did they write?             |               |        |
| v   | <p>A certain pupil was asked to write the name of the figure below</p>  <p>Which correct answer did pupils get</p> |               |        |
| Vi  | Mother bought two and a half kilograms of meat. Write that fraction into an improper fraction                                                                                                        |               |        |
| Vii | In Wambura`s Farm there are 846 goats,                                                                                                                                                               |               |        |

|      |                                                                                                                         |  |  |
|------|-------------------------------------------------------------------------------------------------------------------------|--|--|
|      | 8,076 sheep and 405 chickens. What is the total number of animals in the Wambura's farm?                                |  |  |
| Viii | $\text{IV} / \text{VIII} + \text{III} / \text{VIII} =$ (Answer in Arabic numbers)                                       |  |  |
| Ix   | Use prime factorization method to analyze all factor of 72.                                                             |  |  |
| X    | Which fraction among the following fractions is improper fraction?<br>$[\frac{11}{3}, 3\frac{2}{3}, \frac{5}{6}, 0.69]$ |  |  |

### SECTION B (20 MARKS )

#### 2. Answer the following word problems questions

|     |                                                                                                                                                |  |  |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| i   | Kokunuza who is grade five now was asked to identify all multiples of 6 which are between 12 and 39 Which correct did she write?               |  |  |
| ii  | Basing on concept of multiples that you have learned from your Math teacher, what are the first three multiples of 8?                          |  |  |
| Iii | Find the next number in the series<br>29, 23, 19, _____, _____                                                                                 |  |  |
| iv  | Grade five pupils were asked by their Math-teacher to identify the first two common multiples of 6 and 7. Which correct answer did they write? |  |  |
| V   | Kyoma and Halima shared 600,000 shillings equally. How much did each get?                                                                      |  |  |

|  |  |  |  |
|--|--|--|--|
|  |  |  |  |
|--|--|--|--|

### 3. Answer the following questions

|     |                                                                                                                                                                                                                                                       |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| i   | Mr. Anold had forty-five goats. He shared his goats among his seven children. How many goats did each child got? And how many goats did Mr. Anold remain with?                                                                                        |  |  |
| ii  | <p>The following watermelon shows the number of pupils at St.Mwombeki primary school.</p>  <p>If one watermelon represents 50 pupils. how many pupils are there?</p> |  |  |
| Iii | Kiumbo visited his sister Jane and stayed with her for exactly three days. How many hours did he stay at Jane's place?                                                                                                                                |  |  |

### 4. Complete the following questions

|     |                                                                                                                     |  |  |
|-----|---------------------------------------------------------------------------------------------------------------------|--|--|
| i   | How many angles are in a pentagon figure?                                                                           |  |  |
| ii  | Work out the sum of all prime numbers which are in the following list of numbers<br>12, 13, 14, 15, 16, 17, 18, 19. |  |  |
| Iii | A rectangular farm has a length of 55metres long and 25metres wide. What is the total distance around it?           |  |  |

### 5. Complete the following question by answering in the space provided

|   |                                                                                                                                                 |  |  |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| I | Three dogs bakes after every interval of 4minutes and 6minutes and 12minutes respectively. After how many minutes will the dogs together again? |  |  |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------|--|--|

|     |                                                                                                                                                    |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ii  | The weight of six seedlings were arranged in consecutive order such that, 11cm,16cm, 21cm, 26cm, 31cm, _____. What is the height of sixth seedling |  |  |
| Iii | If three bells rings after an interval of 6 minutes, 8 minutes and 12 minutes altogether. After how long will they ring altogether once again?     |  |  |

**6. By showing the method complete the following questions**

|     |                                                                                                                                                             |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| i   | A grade five pupil was appointed by his mathematics teacher to write the reciprocal of $3\frac{1}{7}$ . Which correct answer did he give?                   |  |  |
| ii  | Which Among the following fractions is the largest between $\frac{3}{6}$ and $\frac{2}{5}$ .                                                                |  |  |
| Iii | At St Peter primary school there are 897 pupils, 45 teachers and 50 non-teaching staff. What is the total number of people at the school in Roman numerals? |  |  |

**SECTION C ( 10 MARKS)**

**7. Answer the following questions**

|     |                                                                                                |  |  |
|-----|------------------------------------------------------------------------------------------------|--|--|
| I   | Five pupils were assigned to write all factors of 24. If they got correct answer which was it? |  |  |
| ii  | What is the difference between 5 and 8.8?                                                      |  |  |
| Iii | In a sport bonanza last year 137,932 pupils from different school 5,472 guests and 1379        |  |  |

|  |                                         |  |  |
|--|-----------------------------------------|--|--|
|  | staff members attended.                 |  |  |
|  | How many people attended this occasion? |  |  |

**8. Answer the following questions by showing the method in the answer sheet given**

|    |                                                                                                                                                                           |  |  |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| i  | Mr. Onesmo asked his pupils to write the total value of digit 9 in the numeral seven hundred nine thousand five hundred twenty. What was the answer of the correct pupil? |  |  |
| ii | Mr. Gerald assigned a class five girl to find the sum of $\frac{5}{10}$ and $\frac{3}{5}$ . What answer did she get for him?                                              |  |  |
